

I'm not robot!

Laravel blade examples. Laravel blade layout example. Laravel blade not working.

Laravel blade include file with content example; In this tutorial you will learn How to Include one blade to another blade file with content in Laravel. This tutorial will gives you simple example of include a sub-view in Blade templates in Laravel. laravel provide @include directive to include sub view inside blade file. We will show how to include blade tempate in another file? Let's see the below example to include child (included) file to parent blade file. Main Default File: Suppose we have an index default main file something like this resources/views/products/index.blade.php Product List No Name Details @foreach (\$products as \$product) @include('products.details', ['product' => \$product]) @endforeach Included File: Here the included file which will show the table recrods; resources/views/products/details.blade.php {{ \$product->id }} {{ \$product->name }} {{ \$product->detail }} Controller File Code: Here is the controller file where from we are sending the array content data. app/Http/Controllers/ProductController.php
